

Ever heard your big ends knocking?

Don't Listen. Look at Smiths Impulse Tachometer instead.

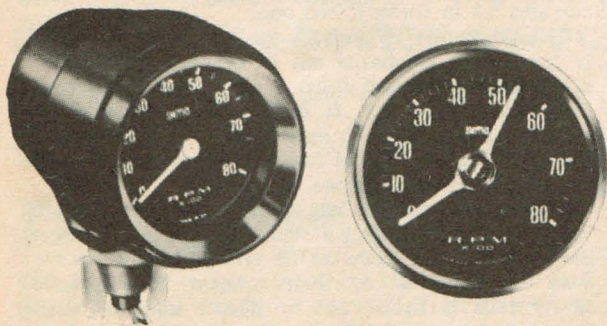

Racing car drivers do without a speedo and rely on Smiths tachometer. Because it tells you plenty: indicates maximum r.p.m. in each gear; gives a guide to engine and gearbox performance; warns about engine damage (valves, bearings, big end) through over-revving. When you're pulling away from the lights, when you change down and accelerate to overtake—Smiths Impulse Tachometer is a danger signal, keeps your engine out of trouble.

Smiths Impulse Tachometer (there are two versions—the 3½" and the 2½" tachometer, designed for mounting on top of the

dashboard) is just one of a comprehensive range of Smiths Instruments. There are Dual-Gauges—combination Oil Pressure and Water Temperature gauges; Battery Condition Indicators to help you avoid breakdowns; lots more, and each clean-lined, easy to install. Only with SMITHS do you get this quality, 12 months guarantee and dealers all around Australia.
