

**Put a wheel on each corner
for better stability... then link
them with fluid for the
smoothest ride**

What a sales pitch—NO PITCH

People who drive a BMC car always comment on the smooth ride, phenomenal roadholding. It's engineered into the car . . . BMC's exclusive Hydrolastic*fluid suspension . . . which gives you the comfort of a boulevard ride combined with "flat" sports car cornering and handling. Hydrolastic*suspension is really a cushion of fluid that eliminates jerks, jolts and pitch. Gives the car a smooth, level, controlled ride. And it's easier on your pocket, too! There are no shock absorbers to wear, springs to rattle. It's virtually trouble-free for life. Engineered safety—BMC offers it with a suspension system that's years ahead of its time. YOU float on fluid—but the car grips the road with a tenacity that means safer motoring for you and your family.

**BMC HYDROLASTIC* FLUID SUSPENSION OFFERS
SAFER MOTORING THROUGH BETTER ROADHOLDING**
